Human Full ORF Clones Gateway(TM) - RZPD (kan-resist.) RZPD LIB No.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This CDS has been cloned incl. stopcodon.

The CDS has been inserted into pDONR201 via a BP Clonase(TM)
reaction. Additional sequence has been added in front of the start
codon: att. AAAAAA GCA GGC TCC ACC (ATG).

The stopcodon is followed by the 3' att site:

(stop)GACCGAGCTTCTT. att Compared to the reference sequence
NM 001834 ($132483393) we found AA exchange(s) at position (first

This CDS clone is a part of a collection of human full length
expression clones generated by BD Biosciences Clontech and the
expression clones generated by BD Biosciences Clontech and the
larvard Institute of Proteomics. Bach CDS has been cloned in two
forms: with and without stop-codon (to allow fusion with C-terminal
tag). The CDS has been directionally cloned using BD In-Fusion (TM)
cloning system between the Sall should Hindlil sites of the pDNR-DUAL
vector. Additional sequences in the clone: 'ACC' after Sall site
and before 'ATG' to provide Kozak consensus sequence; 'GG' after
last codon and before Hindlil site to maintain reading frame.

This CDS clone is a part of a collection of human full-length
expression clones generated by Harvard Institute of Proteomics.
This ORF clone has been cloned with normalized stop-codon. The CDS
This Der clone has been cloned with normalized stop-codon. The CDS
has been directionally cloned using BD In-Pusion(TW) cloning system
between the Sall and HindIII sites of the pDNR-Dual vector.
Additional sequences in the clone: 'ACC' after Sall site and
before 'ATG' to provide Kozak consensus sequence. Each clone is
clonally isolated and full-length sequence-verified.

This ORF clone has been cloned without stop-codon (to allow fusion with C-terminal tag). The CDS has been directionally cloned using BD In-Fusion(TM) cloning system between the Sall and HindIII sites of the pDNR-Dual vector. Additional sequences in the clone: 'ACC' after last codon and before HindIII site to maintain reading frame. Each clone is clonally isolated and full-length sequence-verified.

Lister Submission

Linet Cubmission

Linet Colone is a part of a collection of human full length

expression clones generated by BD Biosciences Clontech and the

Harvard Institute of Froteomics. Each CDS has been cloned in two

forms: with and without stop-codon (to allow fusion with C-terminal

tag). The CDS has been directionally cloned using BD In-Fusion(TM)

cloning system between the Sall and Hindill sites of the pDNRE DUAL

vector. Additional sequences in the clone: 'ACC' after Sall site

and before 'ATG' to provide Kozak consensus sequence; 'GG' after

last codon and before Hindill site to maintain reading frame.

Clone distribution: http://bioinfo.clontech.com/orfclones.

```
The invention describes a mechanism (MI) a compound to the accordance of the invention describes a mechanism of one or more signature genes test compound, determining the expression of one or more signature genes to by the call, each signature gene comprising a mucleic acid that compound their compound from 154 fully defined sequences (S1) of e.g., 4154, 1582, 645, 2652, 2888, 1194 and 1227 base pairs as given in the specification and their complements, and comparing determined corpression of one or more signature genes to expression in cell not contacted with test compound. Also described are: selecting (M2) one or more signature genes that are indicative of an effective therapy for treating a neuropsychiatric disorder; and a kit (1) for detecting an electroconvulsive seizure (ECS) gene signature, comprising several colligonucleotides, each of which is capable of specifically hybridising to a different ECS signature genes to treat, ameliorate or prevent controlled and ECS signature genes to treat, ameliorate or prevent neuropsychiatric disorders, is also disclosed. (M1) is useful for identifying a compound to treat a neuropsychiatric disorders fand attention deficit hyperactivity disorder. CC disorder (MB) and psychotic depression. (M1) is useful for identifying a compound to treat a neuropsychiatric disorders such as anxiety compounds for treating neuropsychiatric disorders such as moders and prognostic compounds for treating neuropsychiatric disorders such as moders and prognostic compounds for treating neuropsychiatric disorders such as MDD and BAD. (M1) enables multicent parameter high throughput screening of compounds for treating neuropsychiatric disorders screening of compounds for treating neuropsychiatric disorders screening of compounds for treating neuropsychiatric disorders screening of compounds series and enables cost-compounds for treating neuropsychiatric disorders and enables ensure parameter high throughput screening of compounds series.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

```
The invention relates to methods for predicting toxic effects of compounds or the progression of these toxic effects by determining the compounds or the progression of these toxic effects by determining the compound or progression in unexposed tissues or toxin and comparing these to gene expression in unexposed tissues or toxin and comparing these to gene expression in unexposed tissues or calls. Also included are methods of predicting at least one toxic effect of a compound or progression of a toxic effect, preferably the expression in a tissue or cell sample exposed to the compound of two or expression in a tissue or cell sample exposed to the compound of two or core genes listed in the specification, where edifferential expression of the genes is indicative of at least one toxic effect or progression. The method can also be used to identify an agent which modulates the toxic component and predict callular pathways that a compound modulates in a cell. The methods utilise a set of at least two probes (on a solid comport in kit form), where each of the probes comprises a sequence that support in kit form), where each of the probes comprises a sequence that specifically hybridises to a gene listed in the specification, a computer system comprising a database containing information identifying the expression level in a tissue or cell sample exposed to a hepatotoxin of a set of genes comprising at least two genes listed in the specification. The method is useful for elucidating global companies in gene expression and for identifying toxicity markers in drug screening and toxicity massays. The genes and toxicity markers in drug screening and toxicity sessays. The genes and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Predicting toxic effects of compounds or the progression of these toxic effects by determining the changes in gene expression in tissues or cells exposed to the toxin and comparing these to gene expression in unexposed tissues or cells.
                                                                                                                                                                                                                                                               Rat sequence differentially expressed in response to a hepatotoxin #1407.

gene expression information may be used as diagnostic markers for the prediction or identification of the physiological state of tissue or cell sample that has been exposed to a compound or agent. Hepatotoxicity is characterised by centrilobular necrosis and steatosis. The present sequence is an expressed sequence tag (EST) or cDNA derived from a gene which is differentially expressed in response to a hepatotoxic agent

```
The present invention relates to a method for predicting a toxic effect
of a compound. The method comprises preparing a gene expression profile
of a tissue or cell sample exposed to the compound, and comparing the
gene expression profile to a database comprising SEQ ID 1-4925, where
differential expression of the gene indicates at least one toxic effect.
The method is useful for predicting at least one toxic effect of
compound, predicting hepatocoxicity or the progression of a toxic effect
of a compound, identifying an agent that modulates the onset or
progression of a toxic response, predicting the cellular pathways that a
compound modulates in a cell, and identifying an agent that modulates at
least one activity of a protein. The method and compositions of the
present invention using a database of genes having liver toxin-induced
differential expression, are useful in identifying toxicity markers in
liver tissues or cells for drug screening and toxicity assays. Note: The
sequence data for this patent did not form part of the printed
sequence data for this patent did not form part of the printed
cat ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                  Predicting a toxic effect of a compound, useful in identifying toxicity markers in liver tissues or cells for drug screening and toxicity assays, comprises preparing gene expression profile of tissue or cells exposed to the compound.
                                                                                                                                                                                    Elashoff
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 982 BP; 212 A; 266 C; 315 G; 189 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes a method for determining whether a compound induces a toxic effect on a tissue or cell. The method comprises preparing a gene expression profile of a tissue or cell sample exposed to the compound, and comparing the gene expression profile to a database comprising data or information on the Tox mean and non-Tox mean value. The method is useful for predicting or identifying at least one toxic
                                       toxic effect; gene expression profile; hepatotoxicity; diagnostic marker; toxicity marker; toxicity progression; drug screening; primary rat hepatocyte toxicity modelling; gene; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Determining if a compound induces a toxic effect on a tissue or cell, for identifying hepatotoxic compounds, comprises comparing a gene expression profile of a tissue or cell sample to a database of Tox mean and non-Tox

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               638
effect, particularly hepatotoxicity, of a test or unknown compound. The genes listed in the specification are useful as diagnostic or toxicity markers for the prediction or identification of the physiological state of tissue or cell sample that has been exposed to a compound, or to identify or predict the toxic effects of a compound or an agent. These may also be used as markers for monitoring toxicity progression or for drug screening. The present sequence represents a primary rat hepatocyte toxicity modelling related gene sequence from the present invention.
                                                                                                                                                                                                                                                                                                                                         9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   XXXXXXXXXXXXXXXXXX
```

```
The invention relates to methods of predicting at least one toxic effect (or toxicity progression or the mechanism of toxicity) of a compound. The methods involve detecting the level of expression of at least one of a set of 680 genes ADW21622-ADW22301 or at least one of a set of 17 genes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            in development of safe drugs, by specific genes in cells exposed

The method comprises a gene expression profile of a tissue or cell sample exposed to the compound, and comparing the gene expression profile to a database comprising at least part of the data or information given in the specification. The methods are useful for progression of a toxic effect of a compound, predicting the renal progression of a toxic effect of a compound, predicting the renal coxicity of a compound, or identifying toxicity markers in tissues or cells exposed to known renal toxin. The genes are useful as toxicity markers in drug screening and toxicity assays, in monitoring disease or physiological states, or disease progression. This polymucleotide represents a rat DNA sequence relating to the toxic effect database described in the specification. NOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the World Intellectual Property
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ï
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                158
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   120

controlled ADW22362, ADW22414 and ADW22481-ADW22483) in a tissue or cell exposed to the compound, and determining whether the gene is differentially expressed compared with a control tissue or cell.

Differentiall expression of the gene in the presence of the compound is differential expression of the gene in the presence of the compound is indicative of a toxic effect, of toxicity progression or of a specific mechanism of toxicity. The toxic effect is especially hepatotoxicity, the recrossis, protein adduct formation or fatty liver. The invention also relates to sets of primers and probes specific for at least two genes selected from ADW21622-ADW22301; solid supports (e.g., DNA chips) and kits containing the probes; and a database containing DNA sequence information and expression information for at least two of the 680 genes from hepatotoxin-exposed tissues. The invention is based on the determination of global changes in gene expression in tissues or cells exposed to known toxins, particularly markers) that are differentially expressed on toxins exposure. The changes in gene expression can be characteristic of different mechanisms of hepatotoxicity, mediated by various classes of compounds. Such compounds in the contained and compounds such compounds and compounds an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           toxicology screening for predicting the toxic effects (especially hepatotoxic effects) of compounds for the development of safer drugs. Sequences ADW21622-ADW22301 represent specifically claimed hepatotoxicity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  include: direct acting compounds which cause damage to macromolecules, especially proteins and lipids by directly interacting with them; steatotic compounds which cause an accumulation of fat in the liver; and cholestatic compounds which impair bile flow or bile acid transport, resulting in jaundice. The methods of the invention are useful in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             genes of rat origin whose expression is altered on exposure to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        hepatotoxins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  marker

of a toxic response to ome or more individual compounds and for predicting or elucidating the potential cellular pathways influenced, induced or modulated by the compound or test agent. The kit is useful for predicting or modulated by the compound or test agent. The kit is useful for predicting or modelling the toxic response of a test compound, for monitoring the progression of renal disease states, for identifying genes that show promise as new drug targets and for screening known and newly designed drugs. This sequence corresponds to a gene marker used in the method of the invention. (Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences). Predicting (the progression of) a toxic effect of a compound, for monitoring the progression of renal disease states, comprises preparing a gene expression profile of a kidney tissue or cell sample exposed to the The invention relates to a method of predicting (the progression of) a toxic effect of a compound by preparing a gene expression profile of a kidney tissue or cell sample exposed to the compound and comparing the gene expression profile to a database, or detecting the level of gene (s) expression in a tissue or cell sample exposed to the compound, where differential gene expression compared to a control indicates a toxic effect (toxicity progression). The method is useful for predicting (the progression of) at least one toxic effect of a compound. The genes are useful as toxicity markers in drug screening and toxicity assays. The methods are useful for predicting the likelihood that a compound or test agent will induce various specific kidney pathologies, such as nephritis, kidney necrosis, glomerular and tubular injury, or focal segmental glomerulosclerosis. The methods are useful for determining the similarity marker; ds; toxic effect; gene expression profile; kidney tissue; differential gene expression; toxicity progression; toxicity drug screening; toxicity assay; kidney pathology; nephritis; kidney necrosis; glomerular injury; tubular injury; focal segmental glomerulosclerosis. The invention relates to a method of predicting at least one toxic effect of a compound by obtaining a gene expression profile of a tissue or cell sample exposed to the compound and comparing the gene expression profile to a database of toxicity prediction genes which are differentially expressed on exposure to known toxins. The tissue or cell sample is preferably derived from heart tissue, and the predicted toxic effect is cachycardia, myocardial ischemia, and the predicted toxic effect is cachycardia, myocardial ischemia, and the shock or other specific heart pathologies. The invention is based on the elucidation of global changes in gene expression in tissues or cells exposed to known toxins, particularly cardiotoxins, and the identification of individual genes (toxicity cardiotoxins, and the identification of individual genes (toxicity cardiotoxins, and the identification of individual genes (toxicity or cardiotoxins, and the identification of individual genes (toxicity or compound's toxic effects, for predicting the cardiotoxicity of a compound, for identifying an agent that modulates the onset or progression of a toxic response, and for predicting which cellular progression of a toxic response, and solid supports and kits comprising them. The method of the invention is useful in toxicology screening for toxicity predicting the toxic effects (sepecially cardiotoxic marker compounds such as pharmaceutical agents or environmental pollutants. Sequences ADV39135-ADV41830 represent cardiotoxicity marker compounds such as pharmaceutical agents or environmental pollutants. Sequences ADV39135-ADV41830 represent cardiotoxicity marker form part of the printed specification, but was obtained in electronic contour directly from WIPO at ftp. wipo.int/pub/published_pot_genences. 218 180 158 278 Predicting a toxic effect of a compound by obtaining a gene expression profile of a tissue or cell sample exposed to the compound and comparing the gene expression profile to a database comprising all of the data given in the specification. 159 TCGGGGCACCTGCCGCCAGCCAGGGGCCTCTGCGCAGCCCGGACTCGCGAGCGGGGGGTG GTTCGGAGGACTAGGGGTCAATGGAGATGTGTTTTCAGGAGGCTAACGGGCCTG GTTCGGAGGACATGGGACTACAGTCAATGGAGATGTTTTTCAGGAGGCTAACGGGCCTG CCGATGGCTACGCTGCGATTGCCCCAGGCGGACAGGTTGACTCAGGAGCCTGAGAGCATCC TCGGGGCACCTGCCGCCAGGTGGCCTCTGCGCAGCCCGGACTCGCGAGCGGGGTG 1 CGGCCGCCTTCCTGGCCCCAGCAGAGCGAGATTGCTGGCATCGAGAATGACTCGGGTT Gaps 54; Length 982; Sequence 982 BP; 212 A; 266 C; 315 G; 189 T; 0 U; 0 Other; Indels 88.0%; Score 471; DB 13; 90.8%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to detecting (M1) granulocyte (GC) activation (GCA), by detecting the level of expression of gene(s) (Gs) identified by DNA chip analysis as given in the specification, and comparing the expression level to an expression level in an unactivated GC, where differential expression of GS is indicative of GCA. Also included are modulating (M2) GA by contacting GC with an agent that alters the capable of modulating GCA or an inflammation (especially chronic) in a tissue, an altergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease using the gene expression profile; (3) detecting (M4) an inflammation (especially chronic) in a pathogen or sterile inflammatory disease using the level of expression of the gene is indicative of inflammation; (4) treating (M5) an inflammatory disease, by detecting the level of expression of the gene is indicative of inflammation; (4) treating cresponse in a subject to a pathogen or sterile inflammatory disease, by detecting the level of expression of the gene is indicative of inflammation; (4) treating cresponse in a subject, exposure of a subject to a pathogen or sterile inflammatory disease, by contacting a tissue having inflammation with an englect that modulates the expression of gene(8) from Gs in the tissue. M1 is useful for screening an agent capable of modulating GCA preferably in an subsculum and subject contacting GCA preferably in an subsculum and subject contacting GCA preferably in an subsculum and subject contacting GCA preferably in an subject contacting GCA is useful for modulating GCA preferably in an subject contacting an subject contacting an subject contacting GCA preferably in an subject contacting and subject contacting GCA preferably in an subject contacting GCA prefer

inflammation in a tissue; M4 is useful for detecting an inflammation (especially chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease (e.g. psoriasis, rheumatorid arthritis, glomerulonephritis, asthma, thrombosis, cardiac reperfusion injury, renal reperfusion injury, ARDS, adult respiratory distress syndrome, inflammatory bowel disease, Crohn's disease, ulcerative colitis, periodontal disease, also bacterial infection, viral infection, parasitic infection, processed in fection, fundal infection and M5 is useful for treating one of the above conditions. The present sequence represents a gene differentially expressed in granulocytes. Note: The sequence data for this patent did electronic format directly from MPD at the was obtained in electronic format directly from MPD at the was obtained in the way of the wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              389

                                                                                                                                                                                                                                                          The invention relates to an array for screening a patient for resistance to docetaxel comprising complementary nucleic acid probes attached to a solid surface for at least 10 of the nucleic acids chosen from 91 fully defined sequences as given in the specification. The array is useful for screening a patient for resistance to docetaxel. The array is also useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       269

This invention describes a novel method of predicting or determining whether a mammal will respond or is responding to an anti-cancer agent that modulates cyclin-dependent kinase (cdk) activity. The method comprises measuring the level of one or more biomarkers selected from comprises measuring the level of one or more biomarkers selected from CC 2774 biomarkers given in the specification (nucleotide sequence SEQ ID comparison is utilized in a kit for determining or predicting whether comparison is utilized in a kit for determining or predicting whether comparison is utilized genetic profiles for treating diseases and cutilizing individualized genetic profiles for treating diseases and discorders based on patient's response and molecular level, specialized microarrays comprising the biomarkers described, antibodies directed comparison the biomarkers and a cell culture model to identify biomarkers. The cdk modulator is preferably N-2-[[5-(1,1-Dimethylethyl)-2-croazolyl]methyllthiol-2-thiazolyl-4-piperidine carboxamide, 0.5-L-croazolyllmethyllthiol-2-thiazolyl-4-piperidine carboxamide, of to the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pot_sequences. This comparison.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              181 CCGATGGCTACGCTGCGATTGCCCAGGCGGACAGGTTGACTCAGGAGCCTGAGAGCATCC 240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Biomarkers useful for predicting or determining the response of a mammal to a cancer treatment comprising administration of a modulator of cyclin-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           TCGGGGCACCTGCCGCCAGGTGGCCTCTGCGCAGCCCGGACTCGCGAGCGGGGGTG

                                                                                                                                                                                                  689
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          whether a mammal will respond or is responding to an anti-cancer agent that modulates cyclin-dependent kinase (cdk) activity. The method comprises measuring the level of one or more biomarkers selected from 2774 blomarkers given in the specification (nucleotide sequence SEQ ID NO:1246 (Genbank EST W28729) is appecially preferred). The method of the invention is utilized in a kit for determining or predicting whether patient would be susceptible or resistant to treatment by an agent modularing cdk activity. The invention also describes a method for utilizing individualized genetic profiles for treating diseases and disorders based on patient's response and molecular level, specialized microarrays comprising the biomarkers described, antibodies directed against the biomarkers and a cell culture model to identify biomarkers. The cdk modulator is preferably N-5-[[5-(1,1-Dimethylethyl)-2-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Biomarkers useful for predicting or determining the response of a mammal to a cancer treatment comprising administration of a modulator of cyclin

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      722
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              782
oxazolyl]methyl]thio]-2-thiazolyl-4-piperidine carboxamide, 0.5-L-tartaric acid salt. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published pct sequences. This sequence encodes a biomarker used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9

The invention relates to 625 polymucleotides which have been derived from a variety of human tissue sources and which encode novel secreted proteins, their complements and sequences that hybridse to them. Also included are a vector comprising the polymucleotide, a host cell transformed with the vector, the proteins encoded by the polymucleotides, an entibodies that bind to the proteins encoded by the polymucleotides of the proteins or the expression of file polymucleotide. The polymucleotides can be used as probes for the identification and isolation of full length contains and genomic DNA. The polymucleotides and proteins can also be used as nutritional supplements. The protein is useful in the treatment of various immune deficiencies and psorders such as viral infections, bacterial infections, fungal infections, autoimmune disorders (e.g. bacterial infections, multiple sclerosis, autoimmune thyroiditis and diabetes) and allergic reactions and conditions (e.g. asthma). They are also useful for tissue regeneration, for wound healing can die burns, inflammatory disorders (e.g. coapulation disorders can also useful for regulating haematopolesis, for treating myeloid or also treating mematorial and ulcers. The proteins are also useful for regulating haematopolesis, for treating myeloid or lighting and also useful for regulating haematopolesis, for treating myeloid or lighting are contained to the contained also be and in the present sequence is one of the 625 cDNA lighting the present sequence is one of the 625 cDNA ij 247 835 127 715 595 308 GGAGTGGCGGGAGAAGGCCAAAAAAGACCTGGAGGAGTGGAACCAGCGCCAAAGTGAACA 367 GGACATGGGGACTACAGTCAATGGAGATGTGTTTCAGGAGGCTAACGGGCCTGCCGATGG 187 248 GAGAGAGGAGGAGAAAAAGGCTGCAGGAGTTGGATGCTGCCTCGAAGGTGACGAACA 307 67 Six hundred and twenty five polynucleotides derived from a variety of human tissue sources which encode secreted proteins, useful for treating immune deficiencies and disorders such as autoimmune disorders.                       diabetes) and allergic reactions and conditions (e.g. asthma). They are also useful for treating neurodegenerative diseases (e.g. Alzheimer's disease, Parkinson's disease), liver fibrosis, coagulation disorders (e.g. haemophilia), inflammatory disorders (e.g. Crohn's disease) and tumours. They are also useful for tissue regeneration, for wound healing and in the treatment of burns, incisions and ulcers. The proteins are also useful for regulating haematopoiesis, for treating myeloid or lymphoid cell deficiencies. The present sequence is one of the 625 cDNA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ò
```

```
The invention relates to an isolated polymucleotide comprising any one of 38043 CDNA sequences, appearing as ACH12789-ACH50831, whose sequence was determined by the technique of SBH (sequencing by hybridisation). Also included is a purified polypeptide comprising a sequence corresponding to a reading frame of the novel polymucleotide. The nucleic acid sequences are useful in diagnostics as expressed sequence tags (EST) for clentifying expressed genes or for physical mapping of the human genome, in forensics, in assessing biodiversities, or in identifying mutations responsible for genetic disorders and other traits. The nucleotide sequences are also useful as hybridisation probes, as oligomers for PCR, for chromosome and gene mapping, in the recombinant production of protein, or in generating antibodies specific for it. The present sequence is useful for generating antibodies specific for it. The present sequence is one of the 38043 isolated CDNA/RST sequences. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       283
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          456
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          403
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                156
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                103
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   216
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    276

consists of a mixture of individually tagged normalized libraries constructed from 8, 12 and 18-day embryo. The tag is a string of 3-5 nucleotides present between the Not I site and the oligo-dT track which allows identification of the library of origin of a clone within
                                                                                                                                                                                                                                                                                        120

/note="Organ: Brain; Vector: pXX-Asc; Site_1: EcoR I;
Site_2: Not I; The library was constructed according
Bonaldo, Lennon and Soares, Genome Research, 6:791-806,
1996. Denatured RNA was size fractionated on a 1% agarose
gel. First strand cDNA synthesis was primed with oligo-dT
primer containing a Not I site. Double strand cDNA was
size selected according to mRNA size fraction, ligated
with EcoR I adaptor, digested with NotI and then cloned
directionally into pYX-Asc vector. The library tag
sequence located between the Not I site and the polyA tail
is AGCGAGACAG. This library was created for the University
Iowa Brain Anatomy Project (BMAPP): 'Gene Discovery in the
Developing Mouse Nervous System', supported by National
Institute of Mental Health (NIMH), Hemin Chin, Ph.D.,

CDNA library was prepared and sequenced in Mouse Genome
Encyclopedia Project of Genome Exploration Research Group in Riken
Genomic Sciences Center and Genome Science Laboratory in RIKEN.
Division of Experimental Animal Research in Riken contributed to
prepare mouse tissues.
